

GCP AWS To GCP COST Assessment

GCP provides many benefits when it comes to hosting and managing your IT infrastructure in comparison with other cloud providers and on-prem alternatives. These benefits come with their own set of challenges in regards to building secure, cost-effective and robust IT services. Dito's team of GCP experts can help your organization navigate these challenges by systematically reviewing your use of GCP and delivering a prioritized list of actionable recommendations.

We will utilize tools to analyze your AWS deployments, current configurations, compute, data usage etc. and then provide you with a final report that will give the client the cost comparison for running their current landscape in AWS to GCP as well as options to move from AWS to GCP.

What's Included:

Evaluation

Discovery with Technical Stakeholders, Admin and AWS Infrastructure

Dito Cloud Architects and Engineers will talk with your IT stakeholders as well as utilize tools to explore your current architecture to gather AWS data sizing, data usage, compute etc.

Report

Full AWS to GCP Cost Assessment Report

The final report will include an executive summary, a breakdown of total cost comparison as well as detail break outs for the different areas such as compute, data storage etc. Dito will also give potential options and rough cost estimates to migrate from AWS to GCP.

Consultation

Review and Recommendations

Dito will present the final report in a one-hour walk through to answer questions, explain interpretations, cost estimates and options to move forward.
